

Call Center Performance Analytics Dashboard Report

Project Overview

This project focuses on developing an interactive Call Center Performance Analytics Dashboard to monitor customer interactions, representative performance, customer satisfaction, revenue trends, and operational efficiency using Excel, Power BI, SQL, and visualization techniques.

Business Problem

Customer support teams often struggle with tracking operational performance due to scattered reports and lack of centralized dashboards. This project addresses these issues by building a unified analytics solution that improves decision-making and reporting efficiency.

Dashboard Features
Monthly and yearly call trend analysis
Customer satisfaction monitoring
Revenue and purchase amount analysis
Representative-wise performance tracking
Interactive filters and slicers
Customer demographic analysis

Dataset Information

The dataset contains customer IDs, call records, purchase amounts, call durations, representative details, customer ratings, city information, and operational metrics for analytical reporting.

Tools & Technologies

- Excel
- Power BI
- SQL
- Data Cleaning
- Dashboard Design
- Data Visualization

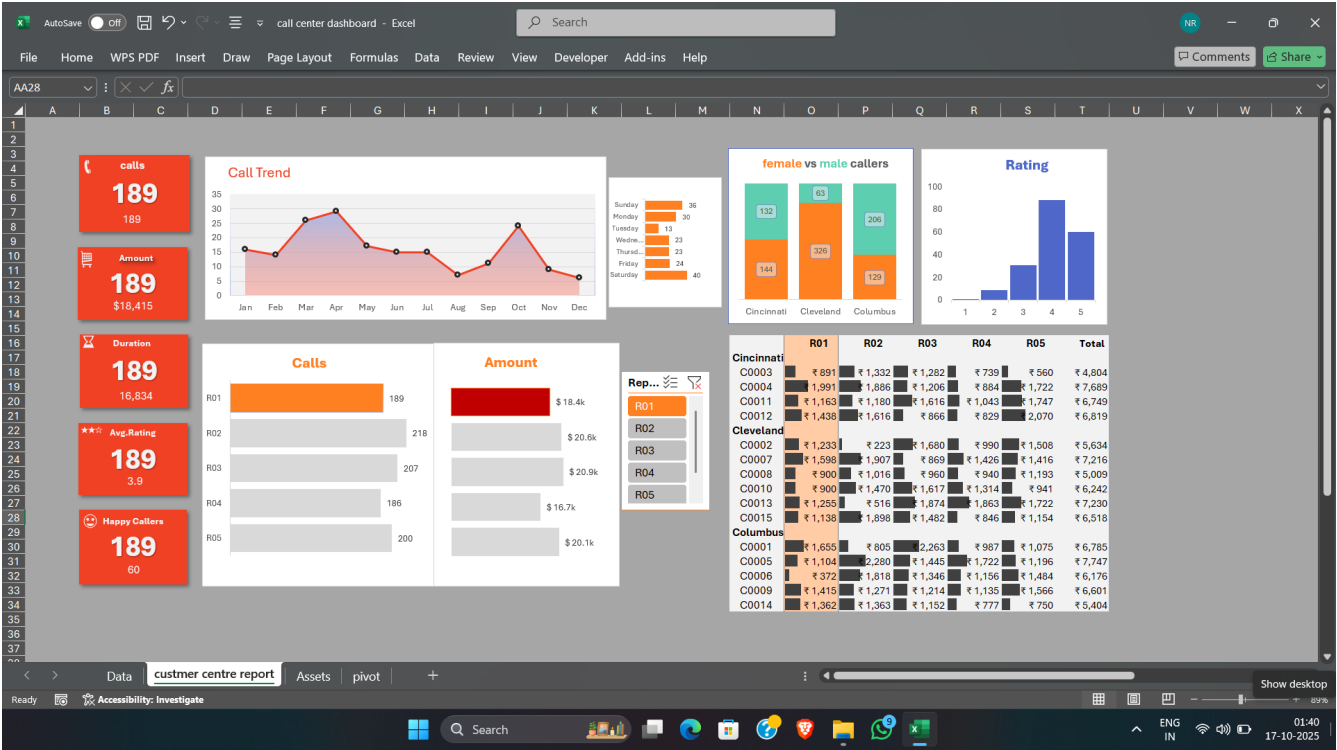

Key Insights

- Identified peak customer call periods
- Analyzed representative performance trends
- Measured customer satisfaction distribution
- Compared revenue generation patterns
- Improved operational reporting visibility

Project Outcome

The dashboard successfully improved operational monitoring, KPI reporting, and customer service analytics through interactive business intelligence solutions.

Dashboard Preview

Call Centre Data														
Call number	Customer ID	Duration	Representative	Date of Call	Purchase Amount	Satisfaction Rating	FY	Day of week	Duration Buckets	Rating rounded	Customer	Gender	Age	City
