

Sales Management Analytics Dashboard Report

Project Overview

The Sales Management Analytics Dashboard is a business intelligence solution developed using Power BI, SQL, Excel, and DAX to analyze sales performance, customer purchasing behavior, product-level insights, and budget tracking. The project transforms raw transactional sales data into interactive dashboards and KPI reports to support data-driven decision-making and business growth analysis.

Business KPI	Value
Total Sales Records	58167
Total Customers	18483
Total Products	4033
Total Sales Amount	\$0

Business Problem Statement

Organizations generate large volumes of sales and customer transaction data daily. However, without proper analytical reporting systems, it becomes difficult to track sales growth, identify customer trends, monitor product performance, and compare actual sales against budget targets. This project addresses these challenges by building a centralized analytics dashboard that provides real-time insights into sales operations and business performance.

Dataset Information

The project uses a star schema data model consisting of:

- Fact Internet Sales Dataset
- Customer Dimension Dataset
- Product Dimension Dataset
- Calendar Dataset
- Budget Dataset

SQL scripts were used for data transformation and preprocessing, while Power BI handled dashboard development and KPI reporting.

Dashboard Features

- KPI Cards for Sales Tracking
- Product Category Analysis
- Top Customer Sales Analysis
- Top Product Performance Tracking
- Budget vs Sales Comparison
- Interactive Filters & Slicers
- Geographic Sales Visualization using Maps
- Monthly Trend Analysis

Key Business Insights

- Identified top-performing products and customer segments.
- Compared sales performance against planned budget targets.
- Analyzed customer distribution across cities and regions.
- Improved business visibility through interactive dashboards.
- Enabled faster decision-making using real-time KPI reporting.

Tools & Technologies Used

- Power BI
- SQL
- Excel
- DAX
- Power Query
- Data Modeling
- Business Intelligence Reporting

Project Outcome

The Sales Management Analytics Dashboard successfully converted raw sales data into meaningful business insights using data visualization and analytical reporting. The project strengthened practical skills in dashboard development, data modeling, business analytics, KPI reporting, and decision-support systems.
